

Water-resistant handy bag

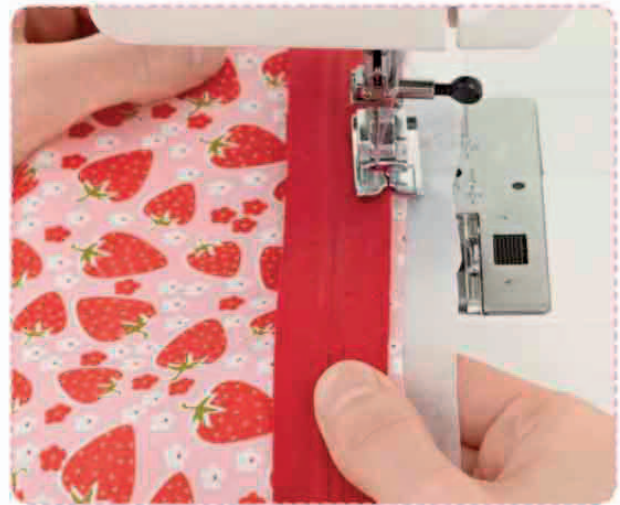

A water-resistant bag is handy for storing damp items after any little accidents or for bringing home dirty cloth nappies. PUL fabric is water-resistant on one side and fabric on the other, so it's perfect for a project such as this one.

YOU WILL NEED ✿ 40 x 64cm (16 x 25¼in) PUL fabric ✿ tailor's chalk ✿ tape measure
✿ scissors ✿ pins ✿ coordinating zip, at least 33cm (13in) long ✿ matching polyester thread
✿ sewing machine ✿ tissue paper or a Teflon® foot for the sewing machine ✿ iron

1 Cut two rectangles from the PUL fabric, one measuring 30 x 64cm (12 x 25¼in) for the bag and one measuring 6 x 40cm (2½ x 15¼in) for the handle.

2 Align and pin the zip to one of the 30cm (12in) edges of the bag fabric, right side to right side. Stitch together leaving a 5mm (¼in) seam allowance. A Teflon® machine foot makes this easier, otherwise place tissue paper against the laminated side of the fabric and tear it away after stitching.
