

1790–1895 Revolutions

In the 19th century, the world was transformed by the development of steam-driven machines, leading to rapid industrialization. The world began to feel like a smaller place due to both faster communication, with the invention of the telegraph, the telephone, and radio, and faster travel, with the introduction of the railroads. Electricity lit homes and cities. A better understanding of disease improved the health of people in the western world, while scientists led the quest for technological innovations to change lives. Most revolutionary of all was the realization that life on Earth had emerged through an extremely long process of evolution.
