

### Settled farmers

With advances in farming techniques, people gave up nomadic lives to settle in villages. The more reliable food supply provided by domesticated plants and animals meant that populations grew. Life began to revolve around an annual cycle of planting and harvesting.

### 8500 BCE

Large wild cattle, or aurochs, were domesticated in western Turkey for meat and milk. Over time they were bred to be smaller and more docile, similar to modern cattle.

### 8500 BCE

Settled communities planted emmer and einkorn (wild wheats). At harvest-time, they kept the best seeds to sow another season, and slowly increased their yields.

### 4300 BCE

The earliest paddy fields for the wet cultivation of rice appeared in China. Rice itself had been domesticated around 3,000 years earlier.

### 3500 BCE

Among South America's few suitable animals, farmers domesticated the llama, its close relative the alpaca, and the guinea pig.

Llama
