

muscle tissue

Tissue forming muscles, which contracts in response to a nerve impulse sent by the central nervous system.

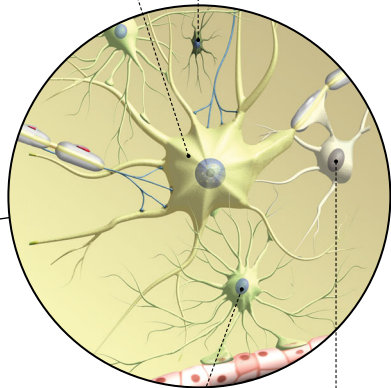

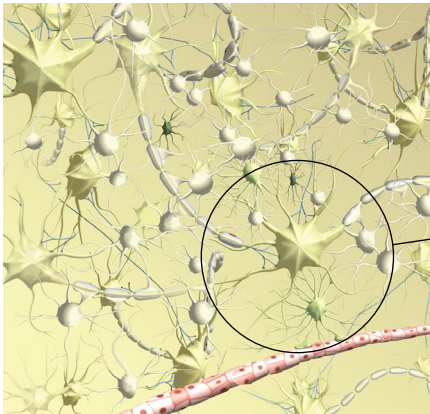

**nerve tissue**

Tissue specializing in transmission of nerve impulses. It is composed of neurons and glial cells, which protect and nourish the neurons.

neuron
Nerve cell that receives, carries, and transmits messages in the form of nerve impulses.

microgliaocyte

Very small glial cell that rids the nerve tissue of foreign bodies and dead cells.

**astrocyte**

Glial cell whose numerous extensions terminate in feet that form barriers between neurons and blood capillaries.

oligodendrocyte

Glial cell that plays a role in formation of the myelin sheath of the neurons in the central nervous system.
