

nervous system

brain

Part of the central nervous system located in the skull, made up of the cerebrum, cerebellum, and brainstem.

cerebrum

Large part of the encephalon formed of two hemispheres; it contains the control center of the higher nerve functions (motor activities, language and others).

corpus callosum

Thin plate of a white substance formed by a bundle of nerve fibers that connect the two cerebral hemispheres.

pineal body

Gland secreting a hormone (melatonin) that mainly influences the biological rhythms.

cerebellum

Part of the encephalon that mainly controls motor coordination, equilibrium, muscle tone and posture.

medulla oblongata

Part of the brain stem that is a continuation of the spinal cord; it mainly controls breathing, blood circulation and cardiac rhythm.
