

SALTWATER FISH

Fish that live in the sea are known as saltwater, or marine, fish. There are around 16,000 marine species.

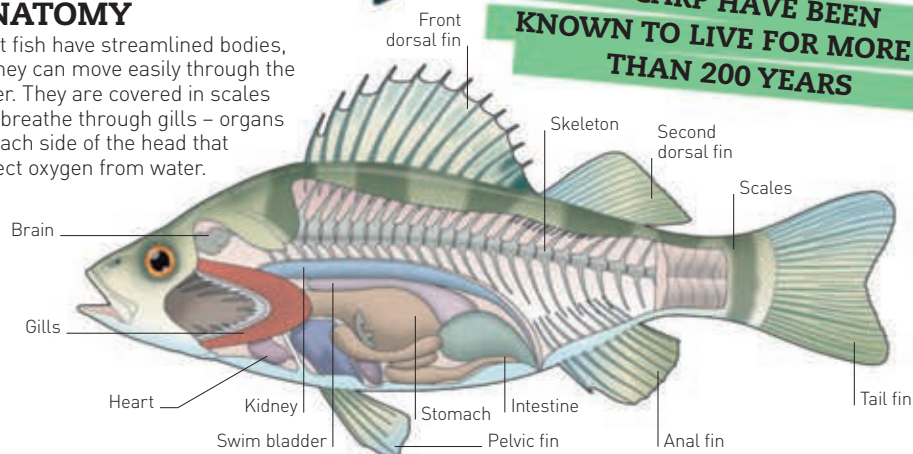

Fish

Fish can be found in nearly every type of watery environment, from mountain streams to the deepest oceans. They range from 12 mm (0.5 in) to 16 m (53 ft) in length, and there are more than 30,000 species.

ANATOMY

Most fish have streamlined bodies, so they can move easily through the water. They are covered in scales and breathe through gills – organs on each side of the head that collect oxygen from water.

KOI CARP HAVE BEEN KNOWN TO LIVE FOR MORE THAN 200 YEARS
