

Melting glacier

Muir Glacier in Alaska has been shrinking for more than 80 years. It has retreated by more than 7 miles (12 km) and is 2,600 ft (800 m) thinner—this shrinkage is shown in the photos below. The glacier is now out of sight from this angle.

Global sea level

Since 1993, the global sea level has steadily increased by about 0.1 in (3 mm) per year, as measured by satellite. During the 100-year period before 1993, sea levels rose by an average of only 0.07 in (1.7 mm) every year.
