

**1.3 MILLION
EARTHQUAKES
HAPPEN EACH YEAR—
BUT MOST ARE
TOO SMALL
TO BE FELT**

Deadliest earthquakes

- 1 Shaanxi, China—January 23, 1556**
Up to 830,000 people may have died in this earthquake. Its magnitude is unknown, since seismometers did not exist at the time.
- 2 Tangshan, China—July 28, 1976**
The official death toll of this earthquake is 242,769 but some observers think that up to 655,000 people may have died.
- 3 Haiti—January 12, 2010**
This 7.0-magnitude earthquake killed 316,000 people, but another 3.5 million suffered shortages of food and clean water.
- 4 Antioch—May 21, 526 CE**
Historical sources report that a huge earthquake hit this Byzantine-Empire city in what is modern-day Turkey.
- 5 Gansu, China—December 16, 1920**
As well as killing 235,500 people, this earthquake created major fractures in the land and devastating landslides.
