

Gakkel Ridge
Nansen Basin

Continental shelf

A continental shelf is the edge of a land mass that lies under the ocean. It slopes gently from the shore toward the continental slope, where the deep ocean truly begins.

Kara Shelf

Laptev Shelf

East Siberian Shelf

Chukchi Shelf

Canada Basin

Barents Shelf

Ocean floor

The enormous mountain ranges, vast plains, and deep trenches of the ocean floor were created by the constant shifting and colliding of the plates that make up Earth's crust.

Aleutian Basin

Emperor Seamounts

A chain of undersea volcanoes stretching from the seamounts at the end of the Hawaiian chain all the way to the Aleutian Islands.

Makarov Seamount

Kuril Trench

Northwest Pacific Basin

Great Yangtze Bank

Philippine Basin

Hawaiian Ridge

Mid-Pacific Seamounts

Central Pacific Basin

Mariana Trench

Arafura Shelf

Mariana Trench
The deepest part of the world's oceans. Its lowest point, the Challenger Deep valley, is 36,070 ft (10,994 m) below the surface.

Ninetyeast Ridge

Mid-Indian Basin

Muirfield Seamount

Christmas Island Seamounts

Crozet Basin

Southeast Indian Ridge

Campbell Plateau

Enderby Plain

South Indian Basin

Kerguelen Plateau
